

AUDIT TOOL

Test Automation of your Terminals

This testing solution allows you to quickly check the terminals compliance to their specifications with only one card or phone. A professional report will be generated in one click.

SERVICE OFFERED

EXTENSIVE TESTS: The test coverage goes beyond the simple functional testing by checking the compliance with specifications (data model, instantiation, fare offer...) and guarantees a high-quality level. All data present in the card can be verified.

SIMPLE AND EFFICIENT: Only one card is needed to perform tests : no more phase to prepare as many cards as there are card contents to test!

Convenient display of test results and easy access to error details.

You can perform up to 300 tests per day !

TEST REPORT: Automatic generation of detailed report in Word and PDF format.

ACCORDING TO YOUR NEEDS

AUDIT TOOL was born out of a standards body's request for a solution to control the quality of Calypso terminals in one day audit.

This solution is proven by 10 years of use by Spirtech and our customers.

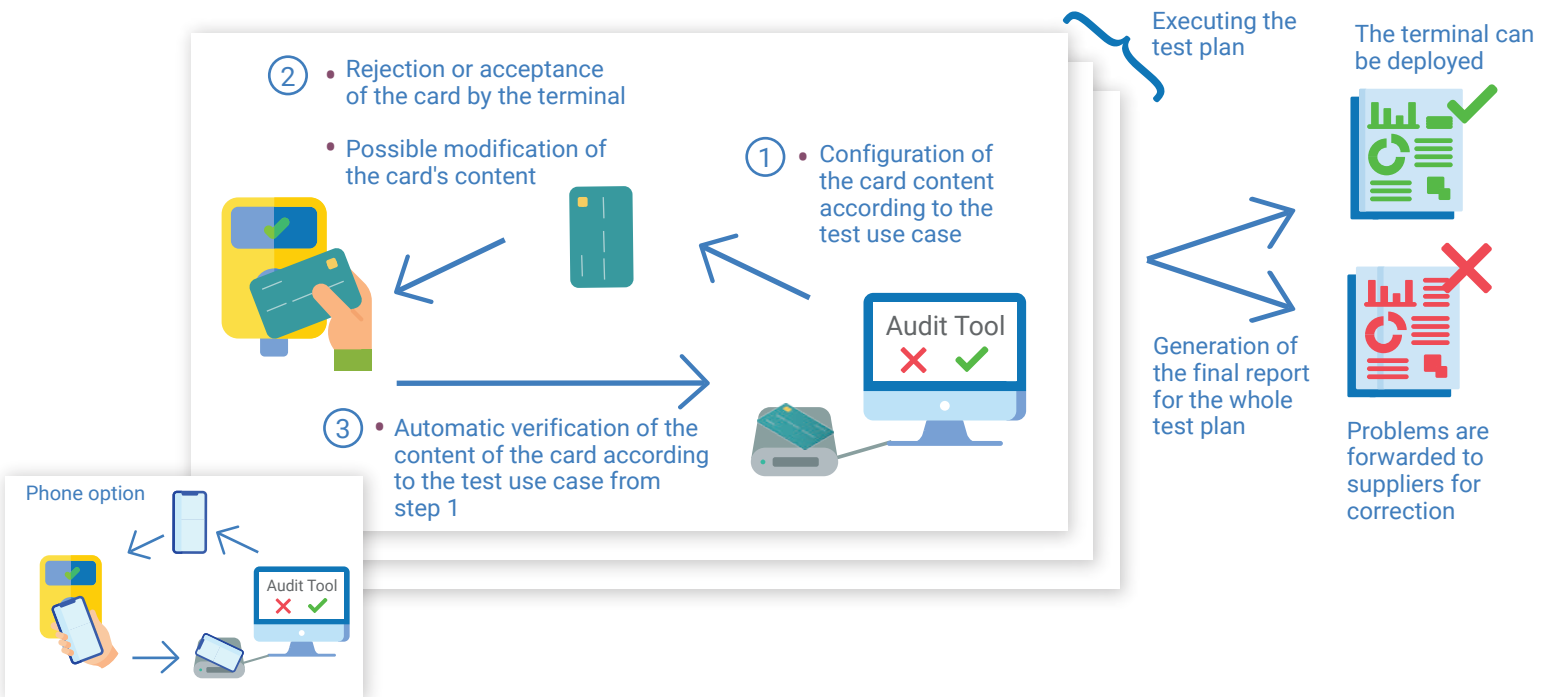

- Fast and comprehensive test session
- Detailed logs for arbitration with suppliers
- Facilitated interoperability testing
- Gain autonomy for the execution of tests

USE CASE EXAMPLE

Your **new terminal** has been delivered and you must **test its compliance with your interoperability referential**. You can test it independently of other terminals.

- **Definition:** Spirtech defines the test plan in accordance with your needs.
- **Control and prerequisites:** A sample of tests is performed to verify the general behavior of the terminal. This allows you to do a prior check before launching the whole test plan.
- **Session:** You run all tests and generate a report.

KPI

EFFICIENCY

One card!
Non regression facilitated
Test coverage increased

TIME SAVING

Gain workload to focus your teams on their job
Get professional report without effort

SPECIFICATIONS

COMPATIBILITY
